Description: Reliance Valves 312 Compact Pressure Reducing Valve (PRV) must be WRAS approved, for use on cold water systems up to 45°C and pressure setting must be adjustable between 1.5 – 6.0 bar. Gauge ports must feature on either side of the valve's base and strainers to protect the seat of the valve. The one-piece cartridge drop tight design must continue to control pressure under flow and no flow conditions. The PRV must be able to be installed in any orientation and come with JG Speedfit connections.
